# Chain Adjustment Tool

Part# AB-15008

2010 + RR/RS/RR-S/Xtrainer models

Instructions for use:

With the bike on a stand (wheels in the air), insert tool under the lower part of the swingarm. It will fit perfectly between the “half round” in the chain slider. Adjust chain tension where the slack at the top of the chain is gone without making the chain “tight”.

Remove the tool and you should have a minimum of 2” chain free play when measured at the rear tire as shown in the photos below.
